

## Benefits Of A Cat-Equipped Wood Stove

- ❑ A catalytic combustor burns smoke by reducing by half the temperature at which smoke ignites, thus generating double the useful heat while reducing pollutants—just like catalytic converters do in automobiles.
- ❑ The added advantage of the wood stove catalytic unit is that you gain the benefit of the extra heat produced.
- ❑ Wood is a renewable resource. Wood keeps regenerating and harvesting trees allows new growth to the forest.
- ❑ Prices of the wood in your area do not fluctuate in war- time or when there is a fuel-spill somewhere in the ocean.
- ❑ Use less wood and produce more heat—a Cat stove “burns” the smoke!
- ❑ Load less often because a Cat stove has twice the low-burn time and more than 50% longer burn time at higher burn rates.
- ❑ A Cat stove reduces pollutants from smoke by up to 95%.
- ❑ One cord of wood in a Cat stove = 166 gallons of oil... you figure the savings!
